

October 25, 2012

Preventing the spread of germs is one of our top priorities. Hand washing and sanitizing is the single most effective way that we can accomplish this goal. As health care providers, we wash and sanitize our hands all day long. Consequently, our skin becomes very dry and irritated.

We began using Kleenhanz in our clinics approximately 6 months ago and have noticed our skin is not red, dry, and itchy anymore! It is safe enough for baby skin and we no longer have to deal with messy gel bottles that stain our walls and furniture. The towels are soft and dispense easily. Our patient's love the product too. Even our UPS man takes a couple of towels everyday. One for his hands and one to wipe down his steering wheel!

We love Kleenhanz and highly recommend this product for business or personal use.

Sincerely,

Linda Ratner RN, CMPE
